Attachments to Appendix D - 2/23/95 and 3/28/95

Dear Mr. Gaskins:

EPA has reviewed the Attachments to Appendix D that were submitted by ABB on February 23 and March 28, 1995. The following recommendations were made:

- o PSC 3 - no recommendation appropriate at this time because PSC is in process of undergoing OU2 RI/FS;
- o PSC 4 - no recommendation appropriate at this time because PSC is in process of undergoing OU2 RI/FS;
- o PSC 5 - This site is recommended for site screening;
- o PSC 9 - This site is recommended for site screening;
- o PSC 17 - This site is recommended for site screening;
- o PSC 18 - No recommendation appropriate at this time because PSC is in process of undergoing radiological survey;
- o PSC 19 - This site is recommended for a NFRAP designation because materials identified for this PSC are limited to petroleum products which are not subject to CERCLA authority. Instead, this PSC should be addressed in accordance with the Navy's UST program, FAC Chapter 62-770 and other appropriate State codes;
- o PSC 25 - This site is recommended for a NFRAP designation pending analytical results of soil sampling confirming absence of radiological contamination. If contamination is present, Bechtel will conduct cleanup as a part of radiological survey;

2

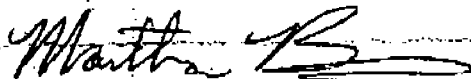

- o PSC 33 - This site is recommended for a NFRAP designation because materials identified for this PSC are limited to petroleum products which are not subject to CERCLA authority. Instead, this PSC should be addressed in accordance with the Navy's UST program, FAC Chapter 62-770 and other appropriate State codes;
- o PSC 36 - This site is recommended for a NFRAP designation pending removal of piles of construction debris by City of Jacksonville. No further action by Navy is required;
- o PSC 40 - This site is recommended for site screening;
- o PSC 44 - This site is recommended for site screening;
- o PSC 47 - This site is recommended for site screening;
- o PSC 49 - This site is recommended for a NFRAP designation.

EPA concurs with the recommendations for PSCs 3, 4, 5, 9, 17, 18, 19, 25, 33, 36, 40, 44 and 47. PSCs 25 and 36 are recommended for NFRAP designations based on the completion of the courses of action outlined in this document. Should those courses of action not be completed as planned, the NFRAP designations should be reevaluated.

EPA disagrees with the recommendation for PSC 49. Given the history of the disposal practices at this PSC and the fact that there is only one screening soil sample, EPA recommends further site screening for this PSC.

If you have any questions, please contact me at 404/347-3555, vmx. 6431.

Sincerely,

Martha Berry
Remedial Project Manager
